

Environmental Policy

FORVIA has placed sustainable development at the heart of its transformation strategy.

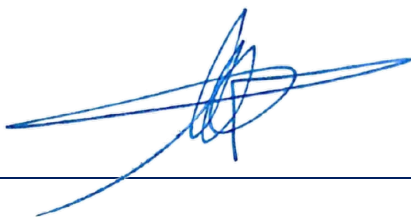

Our conviction is that FORVIA must have a positive impact on society and create sustainable value for all stakeholders. Anchored in the Sustainability roadmap and Group's values, this conviction is expressed through our 4 CSR pillars: planet, business, people, and governance.

Armed with these convictions, our ambition is to become the most eco-friendly automotive technology company. FORVIA aims at reducing the environmental footprint of operations.

We are committed to actively taking measures to protect the environment, prevent pollution, fight climate change, and protect biodiversity, to ensuring compliance with regulatory requirements and those of our customers and other stakeholders.

- We reduce the environmental impacts from the design of our products and processes until the serial life in plants through the implementation of our 10 Green Fundamentals,
- We report monthly on key impacts for each plant, and take actions to meet our reduction targets for CO₂, waste, water, and biodiversity impacts,
- We sustain and continuously improve our performance by implementing ISO 14001 certification in all techno-plants by 2025,
- We ensure that all pollution is prevented with appropriate measures and strictly follow remediation actions on historical contaminated sites,
- We integrate, from the building phase, all requirements of our Green Factory White Book which guides the design, construction and operation of new and existing sites or expansions,
- We adapt our sites to Climate Change.

FORVIA's leadership is committed to implementing the proper governance by deploying high level of training and awareness, applying Group and external standards, performing appropriate audits, and conducting regular review of the results.

Olivier LEFEBVRE
